MEMORANDUM  
ALL DESIGN UNITS

For all projects, the planting plans and specifications for any wetland mitigation are the responsibility of the Bureau of Landscape Architecture. These plans shall be prepared for inclusion in contract documents in the same format as plans and specifications for other plants and grasses.

During the permit application process, when the preliminary wetlands plans are being developed, the Bureau of Landscape Architecture should be contacted. This will help to assure that plant material listed in the permit documents is or will be available from nurseries and suppliers. Since there is a direct correlation with the plant material used, to the grading, final water elevation, and construction dates, preliminary plans should not be advanced without input from the Bureau of Landscape Architecture.

A copy of the permit to construct the wetlands is to be transmitted to the Bureau of Landscape Architecture by the Regional Design Engineer. This will assist the Bureau in assuring no conflict exists with the permit if changes are necessary during the construction of the wetland.
